

# Research IT at Illinois

Research IT is here to bridge the gaps that exist between researchers and technology. We can help at any stage of the research lifecycle. All of our consultations are free, and we often have ways to connect researchers to free or cost-effective resources.

Visit the Research IT Portal, the central location for all things research technology from all across campus and beyond. Or send us a note to get more information.

## *One-on-one help*

From consulting services to application and software development support, we have specialists that can point you in the right direction and support you through your research. We offer the following consulting options:

- **Research Software Collaborative Services**
- **Database Consulting**
- **Stats Consulting**
- **Research Computing Support**
- **General Consulting**
- **Cloud Consulting**

## *Computation & Storage*

Research computing and storage needs are complex and multi-faceted. Campus options include high-performance computing, stand-alone computation systems, cloud computing, and more. We are here to help get you started in the right direction. Our computing and storage resources include:

- **Research Storage as a Service (RSaaS)**
- **Campus Cluster**
- **Research Computing**
- **High Throughput Computing (HTC)**
- **Cloud Computing**

## *Learning*

Need to grow knowledge in a particular software? Want to grow your network between other researchers? We've curated a cross-discipline event directory to fit all your needs. Our learning offerings include:

- **Software and Data Carpentries**
- **Event Directory**
- **Online Trainings**
- **Data Analytics Workshops**
- **Cloud Workshops**
